PROFILE

Backend Developer turned AI Engineer with 2+ years of experience building scalable APIs, enterprise systems, and production-grade AI applications. Proficient in Node.js, FastAPI, PostgreSQL, and LLM-powered systems using RAG, agentic AI, and vector databases. Proven track record of delivering measurable impact — 150+ APIs, 45% efficiency gains, and end-to-end AI hiring platforms. Passionate about combining backend engineering with cutting-edge AI to solve real-world problems.

SKILLS

AI / LLM — RAG Systems, LangChain, Agentic AI, Prompt Engineering, Vector Databases ,(ChromaDB), Embeddings, Ollama, Cerebras API (LLaMA 3.3 70B)

IDEs: - — Visual Studio Code, GitHub

ML / NLP — Scikit-learn, NLP (TF-IDF, Sentiment Analysis), Text Classification, Naive Bayes, Decision Trees, Random Forest

Backend — Node.js, Express.js, FastAPI, Python, REST APIs, System Design, RBAC, Multi-tenant Architecture, Cron Jobs, Workflow Automation

Databases — PostgreSQL, MongoDB, SQLite, SQLAlchemy ORM, Sequelize, pgvector, Redis Caching

Frontend — Next.js, React.js, TypeScript, Tailwind CSS

Languages — JavaScript (ES6+), TypeScript, Python

DevOps / Tools — Docker, Git, Postman, JWT Auth, GitHub Actions

PROFESSIONAL EXPERIENCE

Software Developer (Backend Lead)

01/2025 – present

AppVin Technologies

- Designed and developed 150+ REST APIs for GoEMP, an enterprise HRMS platform serving multi-tenant organizations
- Built a multi-level workflow engine (Leave, Expense, Assets approvals), reducing manual effort by 45%
- Developed auto-scheduling (rota) system, reducing manual planning by 70%
- Optimized PostgreSQL queries and Sequelize ORM, reducing API latency by 30%
- Implemented RBAC and team hierarchy logic for secure multi-tenant architecture
- Led zero-downtime data migration from legacy systems to PostgreSQL
- Integrated Redis caching to reduce database load and improve response time
- Implemented JWT authentication, centralized logging, and monitoring pipelines

MTS (MERN)

07/2023 – 10/2024

GeeksforGeeks

- Built backend services for large-scale Doubt Portal, driving 70–80% increase in user engagement
- Created mentorship platform improving team onboarding efficiency by 30–40%
- Implemented RBAC and secure authentication for enterprise-scale applications
- Improved CI/CD deployment workflows, reducing feature rollout time by 30%

CERTIFICATES

- Full Stack Web Development** — GeeksforGeeks Mar - 2023
- Data structure and algorithm** — Udemy Aug - 2023

EDUCATION

Bachelor of Technology in Computer Science & Engineering <i>Bhagwan Parshuram Institute of Technology</i> Percentage: 80%	08/2020 – 07/2024
Government Polytechnic College <i>Diploma in Electrical Engineering</i> Percentage: 75%	08/2017 – 07/2020

PROJECTS

Go-EMP – Enterprise HRMS Platform • Developed and optimized core HRMS modules including Attendance, Leave Management, Auto Payroll Processing, Contract Management, Help Desk Ticketing System, and Rota/Shift Management. • Designed scalable relational database schemas and implemented Sequelize models with complex associations and query optimization. • Built cron-based automation workflows for alerts , notifications, attendance tracking, leave monitoring, and workforce scheduling.	02/2025 – Present
HireFlow AI — Intelligent Hiring Platform <i>Python, FastAPI, Next.js, PostgreSQL, Cerebras AI, LLaMA 3.3 70B</i> • Built full-stack AI hiring platform with agentic chatbot powered by 24 custom tools • Implemented RAG-based resume analysis with automated scoring (skill, experience, overall 0–100) • Designed role-aware AI agent (HR vs Employee) with persistent chat sessions and tool routing • Features: auto-shortlisting, skill gap analysis, interview question generation, candidate comparison • Stack: Next.js 16 + React 19 + Tailwind v4, FastAPI, PostgreSQL, SQLAlchemy, JWT Auth • GitHub: HireFlow AI link	
SmartDocs AI — Document Q&A System <i>Python, FastAPI, RAG, ChromaDB, Ollama, SQLite</i> • Built RAG-powered document assistant — upload PDFs, ask questions, get accurate AI answers • Implemented vector search with ChromaDB + sentence-transformers for semantic retrieval • Persistent chat history with SQLite, session management, multi-document support	
Sentiment Analyzer — NLP Text Classifier <i>Python, Scikit-learn, TF-IDF, IMDB Dataset</i> • Trained Logistic Regression classifier on 25,000 IMDB reviews achieving 88% accuracy • Built FastAPI endpoint for real-time sentiment prediction with confidence scores	
Canteen web App  A multi-vendor web app built with the MERN stack . • User: Order, pay, and track orders. • Admin: Manage items, process orders, and view transactions. • Super Admin: Oversee users, admins, transactions, and analytics. Provides seamless food ordering and comprehensive management tools.	

INTERESTS

Exploring and learning new technologies.

LANGUAGES

English: Working Proficiency	Hindi: Native
------------------------------	---------------

ADDITIONAL HIGHLIGHTS

- Solved 500+ coding problems on LeetCode & HackerRank
- Built production AI systems: RAG pipelines, agentic chatbots, LLM API integrations
- Strong experience in enterprise data migration, system integration, and backend scaling
- Continuously learning: completed Python, ML, NLP, LLMs, FastAPI, and Vector DB training
